Automotive II  
fixing of gaskets

## Xmelt solution Automotive II fixing of gaskets

Following the outline of a side panel a foam gasket is fixed with pressure sensitive adhesives. You can do without premium gasket material and without laborious pre-treatment of the surfaces, since the gasket sticks even to difficult surfaces this way.

Thanks to Baumer-hhs hotmelt systems that suit your application your machine investment is substantially lower. By using standard

gasket materials Baumer hhs has lowered the cost of production in this side panels.

The automotive industry is known for their high demands on reliability and availability of manufacturing equipment and Baumer hhs gluing systems being a part of it.

The special design of melters allow for preserving the sensible hotmelt during the melting process. Otherwise it would scorch.

The even application of glue lines is achieved by special gear pumps, that have been configured for this use case.

The application gun is equipped with a special extended nozzle. This results in 2-axis instead of 3-axis movement and simplifies the machine itself.

We will be glad to keep you cost of production low – challenge us!

**Baumer hhs offers an extensive range of gluing and quality assurance systems.**
