

Hot melt application in the bag industry

Application description

Hot melt application in the bag industry

Market situation

More and more baked goods are now on offer in supermarkets and bakeries. Special bags are required for this, which allow you to see the product, thereby simplifying the payment process at the checkout.

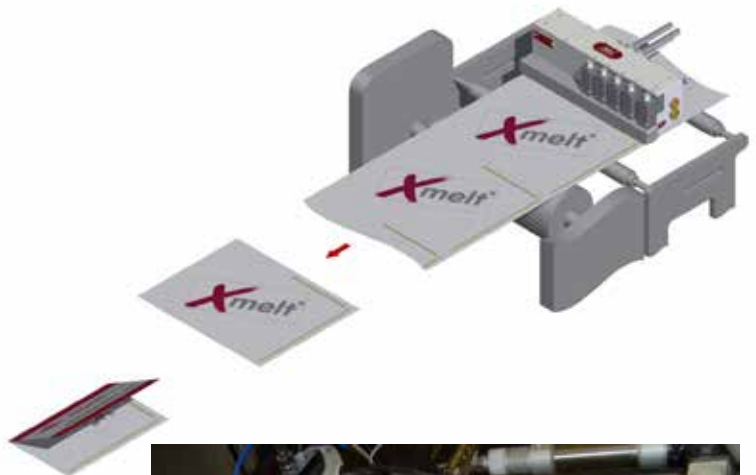

Whether you need to manufacture bags for inside folding cartons, bread roll bags, or any other bags, Baumer hhs has the right adhesive application technology to suit you.

Adhesive application

Coating heads are used here for fast, intermittent adhesive application, as well as glue bead and dot application heads. Bags with film windows are normally glued with hot melt, but it is not unusual to use a combination of hot melt and cold glue if the bags will be used for hot goods such as bread or baguettes.

But gluing bags together is not the only job we do. Our production machines can also be used to manufacture and attach handles

Whether you only need to glue bags together, or to attach handles too - Baumer hhs GmbH is your competent partner for bag manufacture.

Combination adhesive application
„baguette bag”
Hot melt and cold glue

An overview of the advantages

- Application within the production machine
- New product lines require new packaging
- Fast, intermittent surface application
- Flexible production speeds
- Combination of hot melt and cold glue
