## Xmelt solutions Coating

Baumer hhs GmbH as specialist for fast intermittent adhesive application guns, is setting standards with the new coating gun HP-500-C.

The coating head is based on the proven and patented HP-500 guns. Thanks to their integrated pneumatic valves they can switch extremely fast and are robust and compact at the same time. Even at maximum machine speed you can now apply intermittent adhesives.

Continuous coating with highest accuracy in glue distribution and dosage are no problem any more.

The combination of materials with surface treatments allow for highest application accuracy. But also in adhesive allocation and the range of nozzle geometry the designers left nothing to chance.

The coating heads are carried by solid precision brackets and can therefore place exactly relative to your product. This is crucial for optimum coating results and ensures simple setup with reproducible application.

When your product is temperature sensitive, you can easily remove the gun at machine stop. There are brackets for almost any position within your machine.

Matching your special application needs there are several shapes of the gun or can be created for you.

Participate from our long-time experience in coating. We will support you with any unexpected problems in your gluing solutions.

**Baumer hhs offers an extensive range of gluing and quality assurance systems.
